PERSONS IN PARTIES IN NEED OF MANUAL EMPLOYMENT ENTERING
ARIZONA AND CALIFORNIA BY MOTOR VEHICLE

SUMMARY FOR THE YEAR 1941

Report No. 8

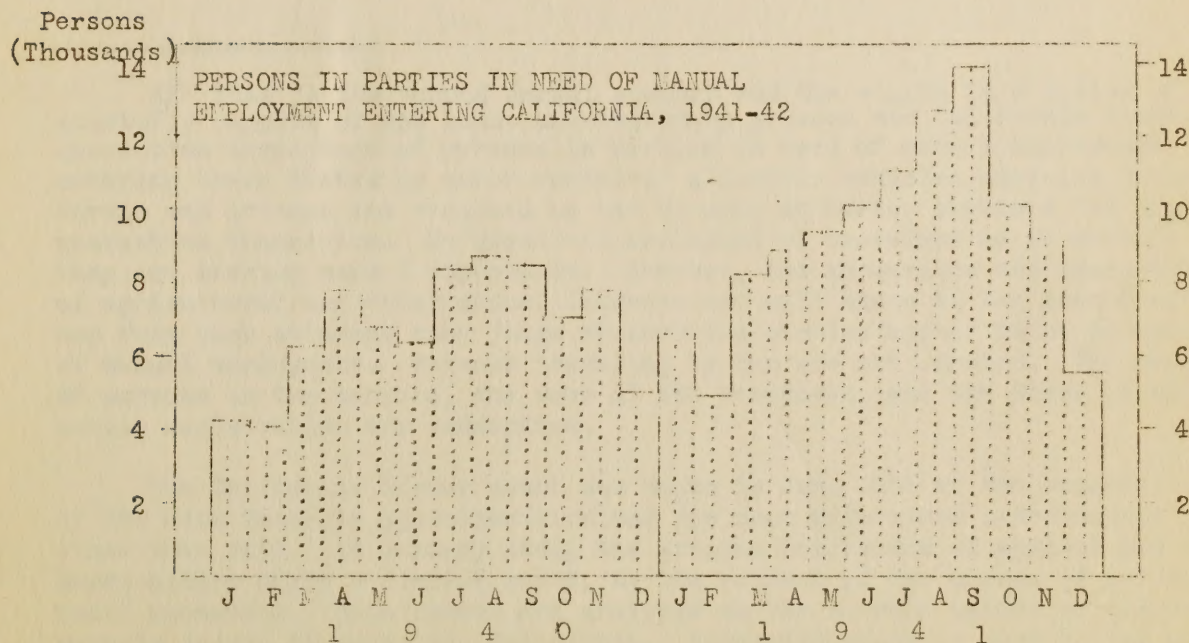

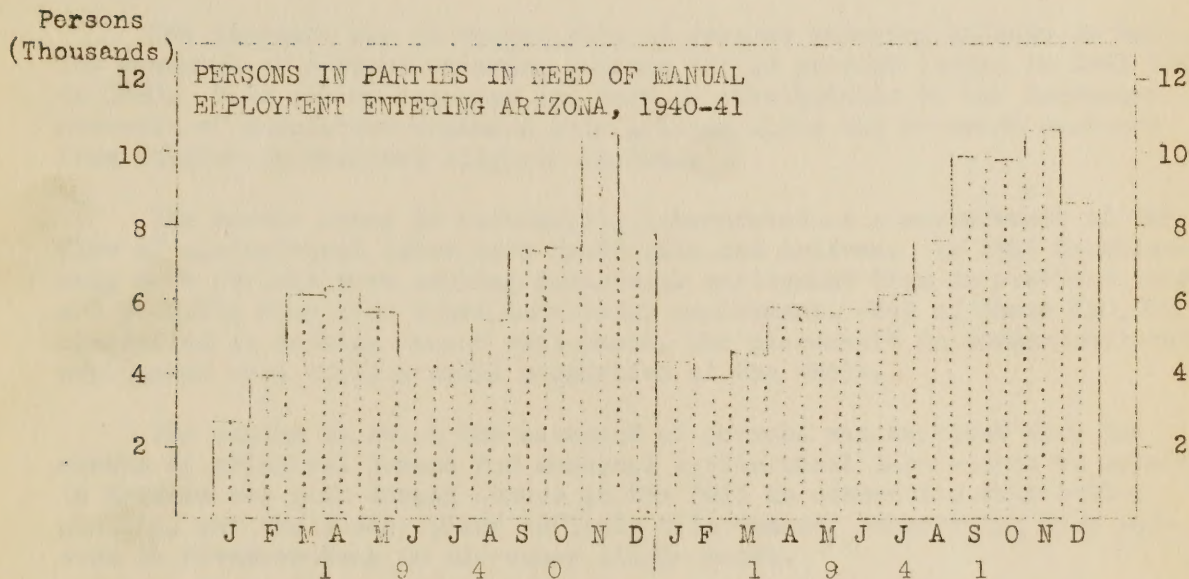

Chart 1.

PERSONS IN PARTIES OF MANUAL LABORERS ENTERING ARIZONA AND
CALIFORNIA BY MOTOR VEHICLE, JANUARY 1 TO DECEMBER 31, 1941 ^{1/}

The count maintained at the California borders of persons in need of manual employment entering the State by motor vehicle was the largest in the six-year history of the border count. Plant quarantine inspectors reported 110,000 such persons entering California. This compares with a previous high of 105,000 persons entering in 1937 at the peak of the drought migration and 80,000 persons in 1940.

The increase was characteristic of persons entering Arizona as well. The movement of persons entering Arizona was 16 percent larger in 1941 than in 1940. This entire increase and more is attributable to the increased movement of population westward into Arizona since the movement eastward from California declined slightly in 1941.

The border count is customarily interpreted as a measurement of the flow of agricultural labor into California and Arizona. In 1941 doubtless many more persons were seeking industrial employment than in previous years and probably many more found industrial employment. But of these 110,000 classified as seeking manual employment, the placements in nonagricultural employment were still a small proportion of the whole.

The months in which the movement of persons was heaviest were the months of principal demand for seasonal agricultural labor--June to October. In Arizona the peak demand occurs in the fall in connection with cotton picking, and the border count reflects this demand, enumerating more persons in November than in any other single month.

^{1/} This is the second annual summary and the eighth in a series of quarterly reports of the count maintained by Arizona and California Plant Quarantine inspectors of persons in parties in need of manual employment entering these States by motor vehicle. All motor vehicles entering California and Arizona are required by law to stop at border stations for plant quarantine inspection. No questions are asked of travelers as to whether they are seeking manual employment. However, the appearance and equipment of agricultural and other manual laborers are well known to the inspectors and from such evidence they judge whether the parties appear to be in need of manual employment. Persons traveling by bus are not counted. The number of persons in the vehicle, the race of the occupants, and the State of automobile registration are enumerated.

The California border count was begun in June 1935 at the suggestion of the Farm Security Administration and has been maintained continuously since that date. In January 1940, the Arizona Commission of Agriculture and Horticulture began a similar count, at the request of the Bureau of Agricultural Economics. Both counts are analyzed in the current series of quarterly reports issued at Berkeley, California. Acknowledgement is made to the Arizona Commission of Agriculture and Horticulture and the California State Department of Agriculture for maintaining these counts.

Data were compiled with assistance of the personnel of Work Projects Administration Official Project No. 165-2-08-374.

REPORT OF THE COMMISSIONER OF THE GENERAL LAND OFFICE
FOR THE YEAR 1900

The report of the Commissioner of the General Land Office for the year 1900 is a comprehensive statement of the work of the Department during the year. It contains a detailed account of the various lands under the control of the Department, and of the manner in which they have been managed. It also contains a statement of the revenue derived from the lands, and of the expenditures incurred in their management.

The report is divided into two main parts. The first part contains a general statement of the work of the Department, and the second part contains a detailed statement of the work of the various divisions of the Department. The first part is divided into three sections: a statement of the lands under the control of the Department, a statement of the revenue derived from the lands, and a statement of the expenditures incurred in their management.

The second part of the report contains a detailed statement of the work of the various divisions of the Department. It is divided into five sections: a statement of the work of the Division of Lands, a statement of the work of the Division of Survey, a statement of the work of the Division of Survey, a statement of the work of the Division of Survey, and a statement of the work of the Division of Survey.

The report is a valuable document, and it is one which should be read by all those who are interested in the work of the Department. It contains a great deal of information, and it is presented in a clear and concise manner. It is a report which should be read by all those who are interested in the work of the Department.

The report is a valuable document, and it is one which should be read by all those who are interested in the work of the Department. It contains a great deal of information, and it is presented in a clear and concise manner. It is a report which should be read by all those who are interested in the work of the Department.

The report is a valuable document, and it is one which should be read by all those who are interested in the work of the Department. It contains a great deal of information, and it is presented in a clear and concise manner. It is a report which should be read by all those who are interested in the work of the Department.

The report is a valuable document, and it is one which should be read by all those who are interested in the work of the Department. It contains a great deal of information, and it is presented in a clear and concise manner. It is a report which should be read by all those who are interested in the work of the Department.

Persons continued to come from the same places as in previous years but in even larger proportions. Oklahoma, which in 1940 contributed 18 percent of all persons counted at the California border, supplied almost 25 percent of all persons in 1941. Texas, Arkansas, and Missouri, all important states of origin in 1940, were even more important in 1941. The number of cars registered in California and Arizona recorded at the California border declined somewhat from 1940 levels, indicating a lesser seasonal movement of laborers with fixed residence.

The important minority groups--Mexican and Negroes--are as well represented in the 1941 as in the 1940 count. The number of Mexicans entering Arizona in 1941 was almost exactly the number entering in 1940. Entry of Mexicans into California in 1941 was within 200 of the number entering in 1940. The movement of Negroes into California, however, was significantly larger in 1941 than in 1940 with an increase of almost 40 percent in volume. The entry of Negroes into Arizona likewise showed a substantial increase.

With the movement of manual laborers into Arizona and California at an all-time high, there is little substance to the frequently published accounts of the disappearance of the migrant. Not only has he not disappeared but he continues to come from the same by no means depleted reservoir, the Southern Plains.

PERSONS IN PARTIES IN NEED OF MANUAL EMPLOYMENT ENTERING
ARIZONA AND CALIFORNIA BY MOTOR VEHICLE

JANUARY 1 TO MARCH 31, 1942

Report No. 9

Persons
(Thousands)

PERSONS IN PARTIES OF MANUAL LABORERS ENTERING ARIZONA AND CALIFORNIA BY MOTOR VEHICLE, JANUARY 1 TO MARCH 31, 1942 1/

Interest in labor migration is especially great this year because of widespread fear of farm labor shortage in those areas dependent upon seasonal and migratory agricultural workers. This apprehension is based in part upon the widespread belief that employment in war industries, scarcity of automotive equipment and tires will diminish the volume of migration.

The following summaries for the period January through March 1942 indicate continued large volume of migration to California and Arizona. The count of persons in need of manual employment, made by Plant Quarantine inspectors in Arizona, record an increase in numbers for the first quarter of 1942 as compared with the same period in 1941. The totals are 15,401 as compared with 12,999. This increase occurs for movement across both the eastern and western borders of Arizona, although the increase is proportionately greater for the movement from California. Each of the three months of record likewise shows an increase over the corresponding month of 1941. Movement from California into Arizona is likely to contain a larger proportion of persons seeking seasonal agricultural employment than is the movement west across the eastern border of Arizona, and it is this movement from California which shows the larger proportional increase in 1942.

The number of persons in need of manual employment entering California declined slightly (less than 300) from 1941 levels in the first quarter of 1942. The decrease is negligible since the total movement into California

1/ This is the ninth in a series of quarterly reports of the count maintained by Arizona and California Plant Quarantine inspectors of persons in parties in need of manual employment entering these States by motor vehicle. All motor vehicles entering California and Arizona are required by law to stop at border stations for plant quarantine inspection. No questions are asked of travelers as to whether they are seeking manual employment. However, the appearance and equipment of agricultural and other manual laborers are well known to the inspectors and from such evidence they judge whether the parties appear to be in need of manual employment. Persons traveling by bus are not counted. The number of persons in the vehicle, the race of the occupants, and the State of automobile registration are enumerated.

The California border count was begun in June 1935 at the suggestion of the Farm Security Administration and has been maintained continuously since that date. In January 1940, the Arizona Commission of Agriculture and Horticulture began a similar count, at the request of the Bureau of Agricultural Economics. Both counts are analyzed in the current series of quarterly reports issued at Berkeley, California. Acknowledgment is made to the Arizona Commission of Agriculture and Horticulture and the California State Department of Agriculture for maintaining these counts.

Data were compiled with assistance of the personnel of Work Projects Administration Official Project No. 165-2-08-374.

aggregated 19,548 persons for the period. The month of March 1942 showed a sharp decline from the previous March with approximately 25 percent fewer persons entering California. February 1942 was markedly higher than the same month of 1941, and the two months combined do not reveal any significant decline in migration.

Persons moving into California and Arizona continue to come from the same areas in about the same proportion as last year, although California contributed a larger proportion of persons entering Arizona this year than in the same quarter of the preceding year and replaced Oklahoma as the major source. Adding Texas to California and Oklahoma the three states jointly contributed 71 percent of all persons counted as compared with 66 percent in the same quarter of 1941.

Sources of persons entering California were almost precisely the same in the first quarter of 1942 as the corresponding quarter of 1941. Returning Californians were 26.9 percent of the total in 1942 and 26.5 percent in 1941. Persons with automobile registrations from Oklahoma constituted 18.1 percent of the total in 1942 and 18.3 percent in 1941. A few less came from Arizona and a few more from Texas but no significant change in origins occurred.

To the extent that the border count is a reliable index of the movements of a potential agricultural labor force, this movement may be said to be undiminished and without substantial change.

1. The first part of the document is a list of names and addresses, which are arranged in a table-like format. The names are listed in the first column, and the addresses are listed in the second column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

2. The second part of the document is a list of names and addresses, which are arranged in a table-like format. The names are listed in the first column, and the addresses are listed in the second column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

3. The third part of the document is a list of names and addresses, which are arranged in a table-like format. The names are listed in the first column, and the addresses are listed in the second column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

4. The fourth part of the document is a list of names and addresses, which are arranged in a table-like format. The names are listed in the first column, and the addresses are listed in the second column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

5. The fifth part of the document is a list of names and addresses, which are arranged in a table-like format. The names are listed in the first column, and the addresses are listed in the second column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

6. The sixth part of the document is a list of names and addresses, which are arranged in a table-like format. The names are listed in the first column, and the addresses are listed in the second column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

7. The seventh part of the document is a list of names and addresses, which are arranged in a table-like format. The names are listed in the first column, and the addresses are listed in the second column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

8. The eighth part of the document is a list of names and addresses, which are arranged in a table-like format. The names are listed in the first column, and the addresses are listed in the second column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

9. The ninth part of the document is a list of names and addresses, which are arranged in a table-like format. The names are listed in the first column, and the addresses are listed in the second column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

10. The tenth part of the document is a list of names and addresses, which are arranged in a table-like format. The names are listed in the first column, and the addresses are listed in the second column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

PERSONS IN PARTIES IN NEED OF MANUAL EMPLOYMENT ENTERING
ARIZONA AND CALIFORNIA BY MOTOR VEHICLE

JANUARY 1 TO JUNE 30, 1942

Report No. 10

Persons
(Thousands)

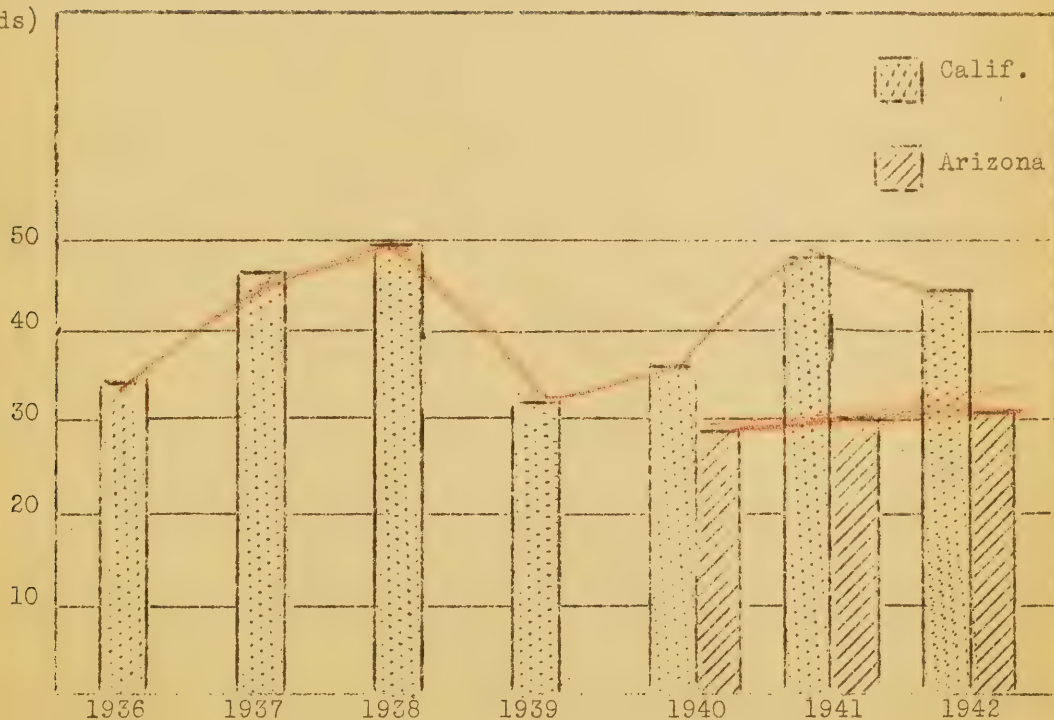

Chart 1.- Persons in parties of manual laborers entering Arizona and California by motor vehicle during the first six months of each year; California 1936-42, Arizona 1940-42

Berkeley, California

August 6, 1942

PERSONS IN PARTIES OF MANUAL LABORERS ENTERING ARIZONA AND CALIFORNIA BY MOTOR VEHICLE, JANUARY 1 TO JUNE 30, 1942 1/

The 1942 tally of "persons in parties in need of manual employment," entering Arizona and California by motor vehicle, made by plant quarantine inspectors of those two States thus far indicates but a slight decrease in amount of migration. The number of persons entering Arizona increased from 30,204 in 1941 to 30,488, but those coming in from the East has declined from 24,538 to 23,071, or by 6 percent (table 1). A drop of 7 percent (48,055 to 44,886) from the 1941 count is shown in the current figures. Since 1941 was a year of exceptionally heavy migration, the current figure remains close to the average for the six preceding years in which the California border count has been conducted.

The monthly fluctuation of persons entering the States of Arizona and California shows some change from the preceding years. Outstanding is the fact that during January and February the movement was greater than in each of the two preceding years, while since February it has been consistently below the 1941 level. This means either that movement of workers by car is beginning to diminish or that the regular seasonal fluctuation is somewhat altered from the norm that has been established in the past.

The difference between 1942 and 1941 seasonal fluctuations in migration appears more clearly when we abstract the count of those persons moving westward only. (See chart 3.) This westward movement, it should be pointed out, makes up the bulk of the enumerated persons seeking manual employment. About three-fourths of all those entering Arizona came from the East and about four-fifths of those entering California came via the Arizona border. In both years the monthly variation of persons entering Arizona on the eastern

1/ This is the tenth in a series of quarterly reports of the count maintained by Arizona and California Plant Quarantine inspectors of persons in parties in need of manual employment entering these States by motor vehicle. All motor vehicles entering California and Arizona are required by law to stop at border stations for plant quarantine inspection. No questions are asked of travelers as to whether they are seeking manual employment. However, the appearance and equipment of agricultural and other manual laborers are well known to the inspectors and from such evidence they judge whether the parties appear to be in need of manual employment. Persons traveling by bus are not counted. The number of persons in the vehicle, the race of the occupants, and the State of automobile registration are enumerated.

The California border count was begun in June 1935 at the suggestion of the Farm Security Administration and has been maintained continuously since that date. In January 1940, the Arizona Commission of Agriculture and Horticulture began a similar count, at the request of the Bureau of Agricultural Economics. Both counts are analyzed in the current series of quarterly reports issued at Berkeley, California. Acknowledgment is made to the Arizona Commission of Agriculture and Horticulture and the California State Department of Agriculture for maintaining these counts.

border and leaving Arizona on the western border is similar, though a greater total volume occurs in the latter case. But the fluctuation in 1942 is quite different from that of the 1941 count. The change is not only toward a reduction in the degree of fluctuation but also toward a change in the peak periods, with a relatively greater number of persons enumerated during the first two months and fewer during the remaining four. This suggests that a larger portion of the persons in parties in search of manual employment are seeking work in war industries other than agriculture, which do not display so great a seasonal variation in labor demand.

The California figures show an increased concentration of cars registered in one of the three States most frequently represented in the past. Almost 70 percent of all enumerated cars entering California bore license plates of California, Oklahoma, or Arizona, in comparison to 56 percent and 57 percent for a similar period in each of the two preceding years (table 5). Oklahoma license plates rose from 23 to over 30 percent of all counted. The most frequent States of registration for persons crossing into Arizona from the East were California, Oklahoma, and Texas. (Table 3.) These accounted for 68 percent of the total, a slight rise over 1941 and 1940. Oklahoma cars were less frequent than the preceding years, while the number registered in California rose from 11 percent to 17 percent of the total.

The proportions of the different races enumerated (tables 2 and 5) remain virtually unchanged, with 93 percent of all entrants into Arizona and 94 percent of all entrants into California classified as White. Mexicans make up most of the remainder, while only about 1 person per 100 counted at all borders is a Negro.

The migration of persons in search for manual employment, characteristic of the past decade, is continuing. While so far it appears to be maintaining the same general level, despite conditions brought on by the war, the figures for the first half of 1942 show a slight diminution over the preceding year. A tendency toward concentration in the nearby States, some lessening of migration in recent months, and the tendency for the monthly fluctuation to be less marked suggests a change in the character of the migration. It is too early, however, to determine the full nature and effect of these changes.

Monthly fluctuation of persons in parties in search of manual employment entering Arizona and California by motor vehicle, first half of 1942, 1941, and 1940 1/

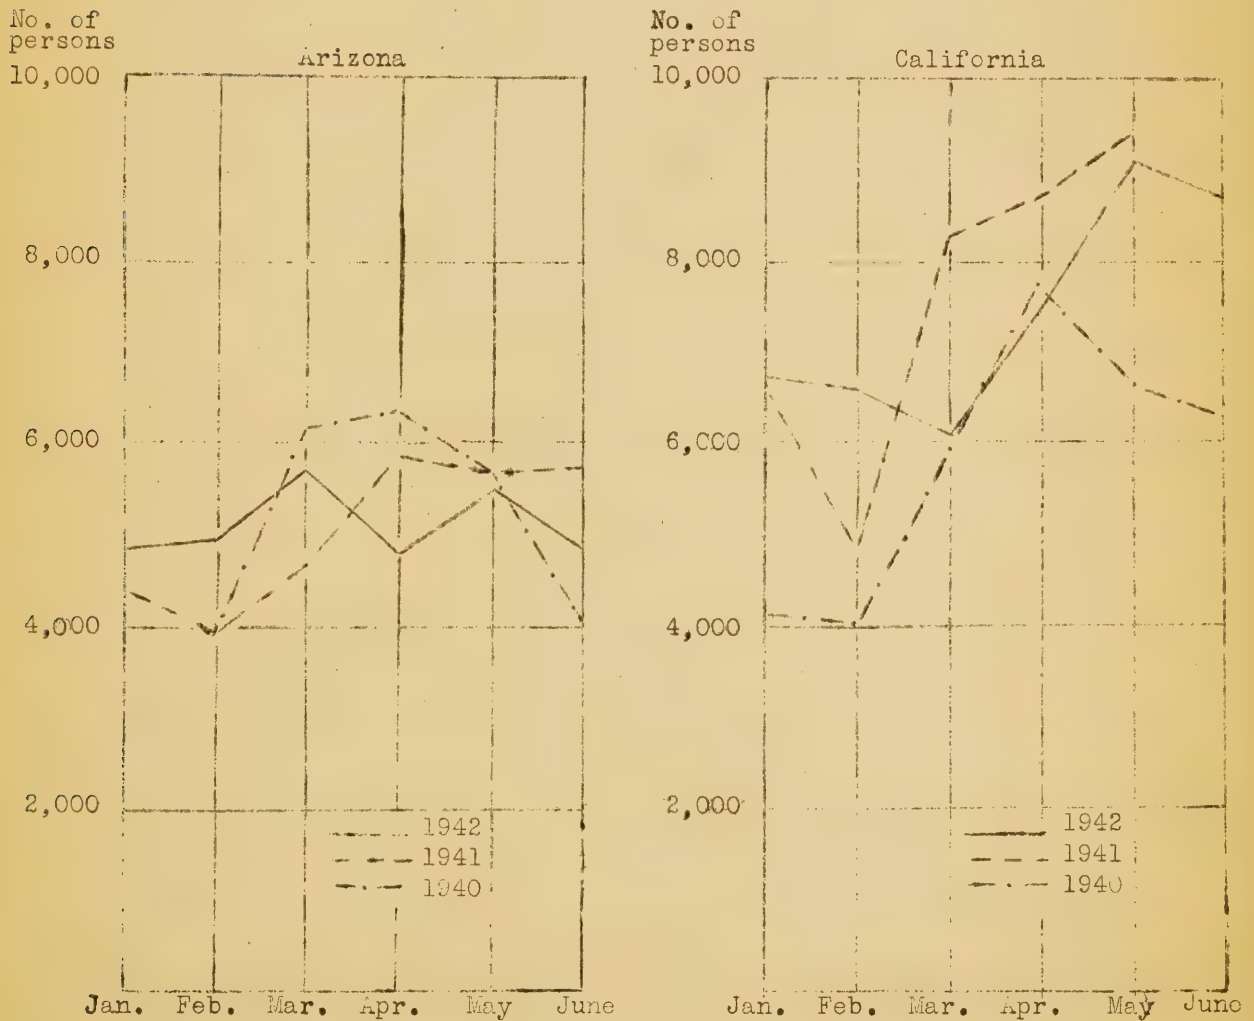

Chart 2

1/ Arizona figure for January 1940 is incomplete and therefore not included.

Persons in parties in search of manual employment entering Arizona
by the Eastern border and California by the Arizona border, by
months for the first half of 1942 and 1941

PERSONS IN PARTIES OF MANUAL LABORERS ENTERING ARIZONA AND
CALIFORNIA BY MOTOR VEHICLE, JANUARY 1 TO SEPTEMBER 30, 1941 ^{1/}

During the first nine months of 1941, California border inspectors counted 85,452 persons, members of auto parties, whom they judged to be "in need of manual employment" entering the State through all borders. This represented an increase of 25,000 over the number counted in the same period in 1940 and 30,000 more than during the same period in 1939. The 1941 count during the first nine months exceeded the previous peak year of 1937 by 10,500 persons.

More than a fourth of all manual laborers entering California during the period under consideration were traveling in cars registered in Oklahoma; nearly 45 percent were from the three States of Oklahoma, Texas, and Arkansas.

The count of manual laborers moving westward into Arizona during the first nine months of 1941 recorded 9,000 more such persons than during the corresponding period in 1940. The eastward movement, however, from California into Arizona during this period was substantially smaller than in 1941.

^{1/} This is the seventh in a series of quarterly reports of the count maintained by Arizona and California plant quarantine inspectors of "persons in parties in need of manual employment" entering these States by motor vehicle. All motor vehicles entering California and Arizona are required by law to stop at border stations for plant quarantine inspection. No questions are asked of travelers as to whether they are seeking manual employment. However, the appearance and equipment of agricultural and other manual laborers are well known to the inspectors and from such evidence they judge whether the parties appear to be "in need of manual employment." Persons traveling by bus are not counted. The number of persons in the vehicle, the race of the occupants, and the State of automobile registration are enumerated.

The California border count was begun in June 1935 at the suggestion of the Farm Security Administration and has been maintained continuously since that date. In January 1940, the Arizona Commission of Agriculture and Horticulture began a similar count, at the request of the Bureau of Agricultural Economics. Both counts are analyzed in the current series of quarterly reports issued at Berkeley, California. Acknowledgment is made to the Arizona Commission of Agriculture and Horticulture and the California State Department of Agriculture for maintaining these counts.

PERSONS, MEMBERS OF PARTIES IN NEED OF MANUAL EMPLOYMENT
ENTERING ARIZONA AND CALIFORNIA BY MOTOR VEHICLE
JANUARY 1 TO JUNE 30, 1941

Report No. 6

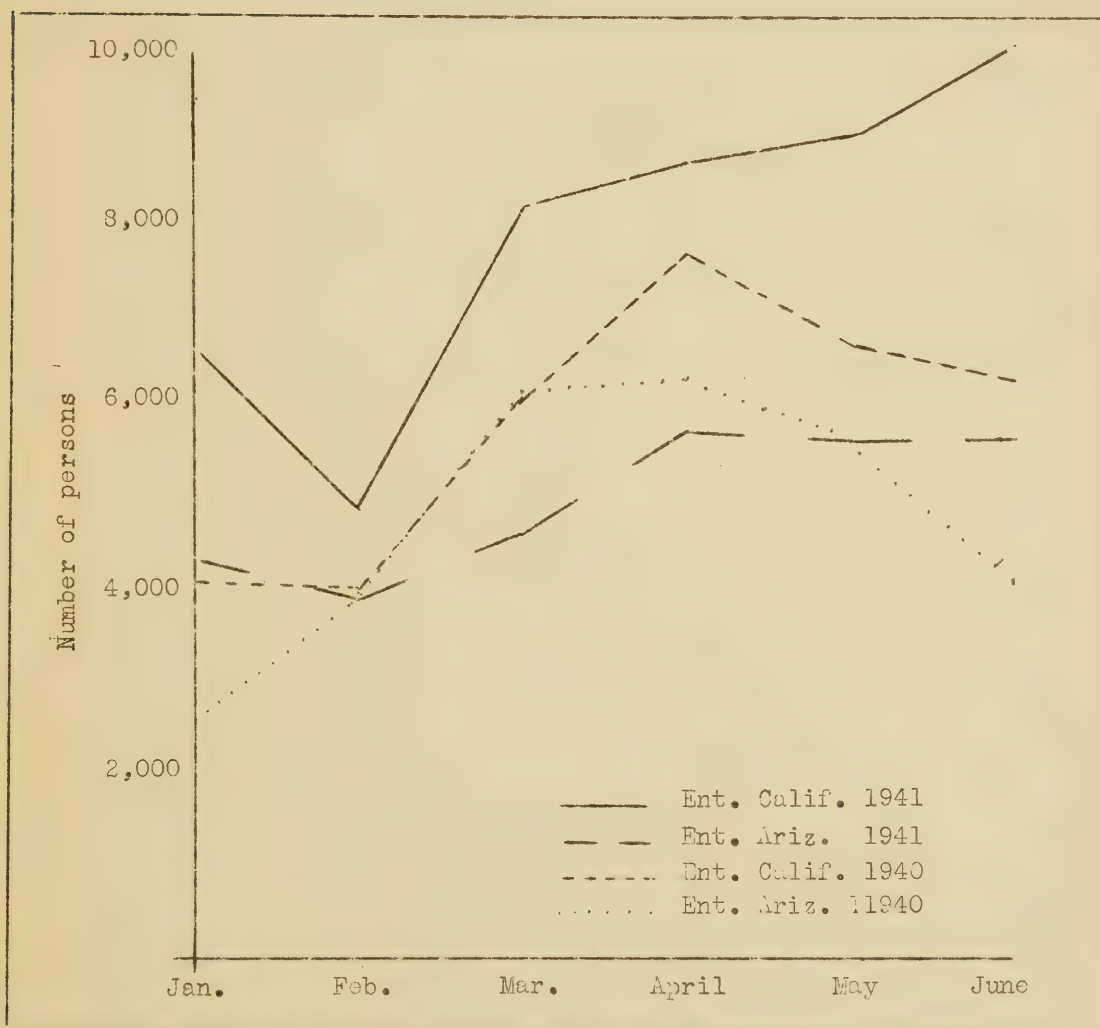

Chart 1.- During the first six months of 1941, Arizona Plant Quarantine Inspectors at the borders of the State counted 30,204 persons in parties, they thought to be in need of manual employment, entering Arizona. California inspectors counted 48,055 such persons entering California in the same period. During this period in 1941, the count of such persons entering Arizona was 1,300 more than in 1940, and for California 13,000 more than in 1940.

PERSONS, MEMBERS OF PARTIES IN NEED OF MANUAL EMPLOYMENT
ENTERING ARIZONA AND CALIFORNIA BY MOTOR VEHICLE
JANUARY 1 to JUNE 30, 1941 ^{1/}

During the first half of 1941, California border inspectors counted 48,055 persons, members of auto parties, whom they thought were in "need of manual employment" entering the State. This is an increase of 13,000 over the number counted in the same period of 1940, and 16,000 more than in the first six months of 1939. The total for the first half of 1938, following the drought and dust storms in the Plains States, was approximately 2,000 more than that for 1941. With the exception of this peak year, reports for 1941 exceed the totals for the first six months of previous years, and the count in April, May, and June of 1941 has not been exceeded for this part of the year since the count was started.

The increased migration to California is almost entirely a westward moving population, entering California largely in cars with license plates from the States of the Southwest. Entries into California from Arizona (on the southeastern border of California) in 1941 were 12,000 in excess of those crossing this border in the same period of 1940; entries across the Nevada border in 1941 were 500 less than for the corresponding period of 1940; manual workers entering California from the north, across the Nevada border, in 1941 exceeded the totals for the previous year by 1,300.

^{1/} This is the sixth in a series of quarterly reports of the count maintained by Arizona and California plant quarantine inspectors of "persons, members of parties in need of manual employment" entering these States by motor vehicle. All motor vehicles entering California and Arizona are required by law to stop at border stations for plant quarantine inspection. No questions are asked of travelers as to whether they are seeking "manual employment." However, the appearance and equipment of agricultural and other manual laborers are well known to the inspectors and from such evidence they judge whether the parties appear to be "in need of manual employment." Persons traveling by bus are not counted. The number of persons in the vehicle, the race of the occupants, and the State of automobile registration are enumerated.

The California "border count" was begun in June 1935 at the suggestion of the Farm Security Administration and has been maintained continuously since that date. In January 1940, the Arizona Commission of Agriculture and Horticulture began a similar count, at the request of the Bureau of Agricultural Economics. Both counts are analyzed in the current series of quarterly reports issued at Berkeley, California. Acknowledgment is made to the Arizona Commission of Agriculture and Horticulture and the California State Department of Agriculture for maintaining these counts.

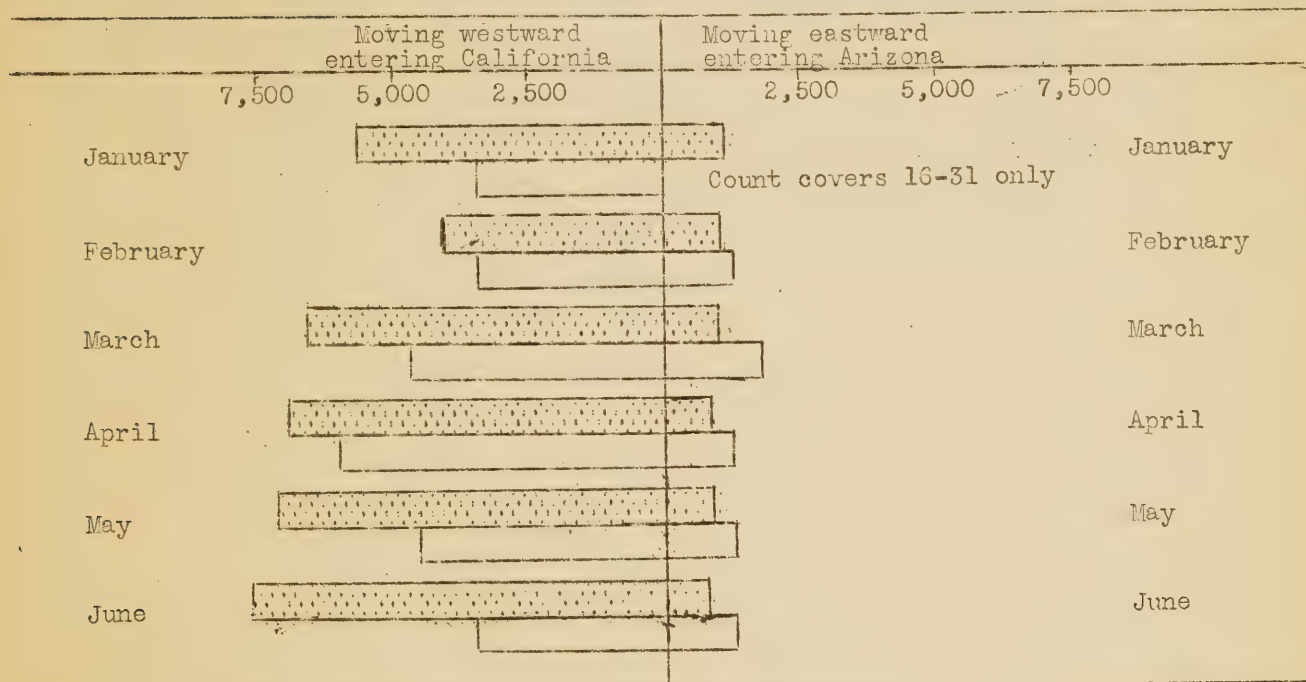

The migration of parties "in need of manual employment" into California and Arizona during 1941 evidently represents a continuation of the migration to the Far West which characterized the decade of the 1930's. The areas of origin, and the routes of migration, so far as the border count reveals them, are the same as in previous years. It is quite evident, however, that a great many of those coming into California in 1941 were in search of employment in defense industries, and therefore possibly constitute a new phase of westward migration.

As in previous years, more than half of the parties entering California on the Arizona border traveled in cars registered in Oklahoma, Texas, Arkansas, and Missouri, more than one-fourth were parties returning to California in California cars, and approximately one out of every seven cars had an Arizona license plate.

It seems probable that the increased westward movement of 1941 is to some considerable extent a migration resulting from employment opportunities in the defense industries on the Pacific Coast. A larger movement from Arizona to California characterized the first half of 1941. In 1940, the number of manual workers entering Arizona from the east and the number leaving Arizona for California was approximately the same. In the first half of 1941, 13,000 more persons "in need of manual employment" left Arizona for California than entered Arizona from the east. A large net increase in migration to California in 1941 is indicated on the California-Arizona border. During the first six months of 1940, for every three persons who entered California from Arizona one such person moved eastward into Arizona from California. In 1941 the increased numbers moving into California from Arizona in each month was accompanied by a smaller number leaving California and entering Arizona in each of those months. The ratio of those moving westward across the California-Arizona border to those moving eastward was six to one in 1941, as compared to three to one in 1940. (See chart 2.)

PERSONS, MEMBERS OF PARTIES IN NEED OF MANUAL EMPLOYMENT
ENTERING ARIZONA AND CALIFORNIA BY MOTOR VEHICLE
JANUARY 1 TO MARCH 31, 1941

Report No. 5

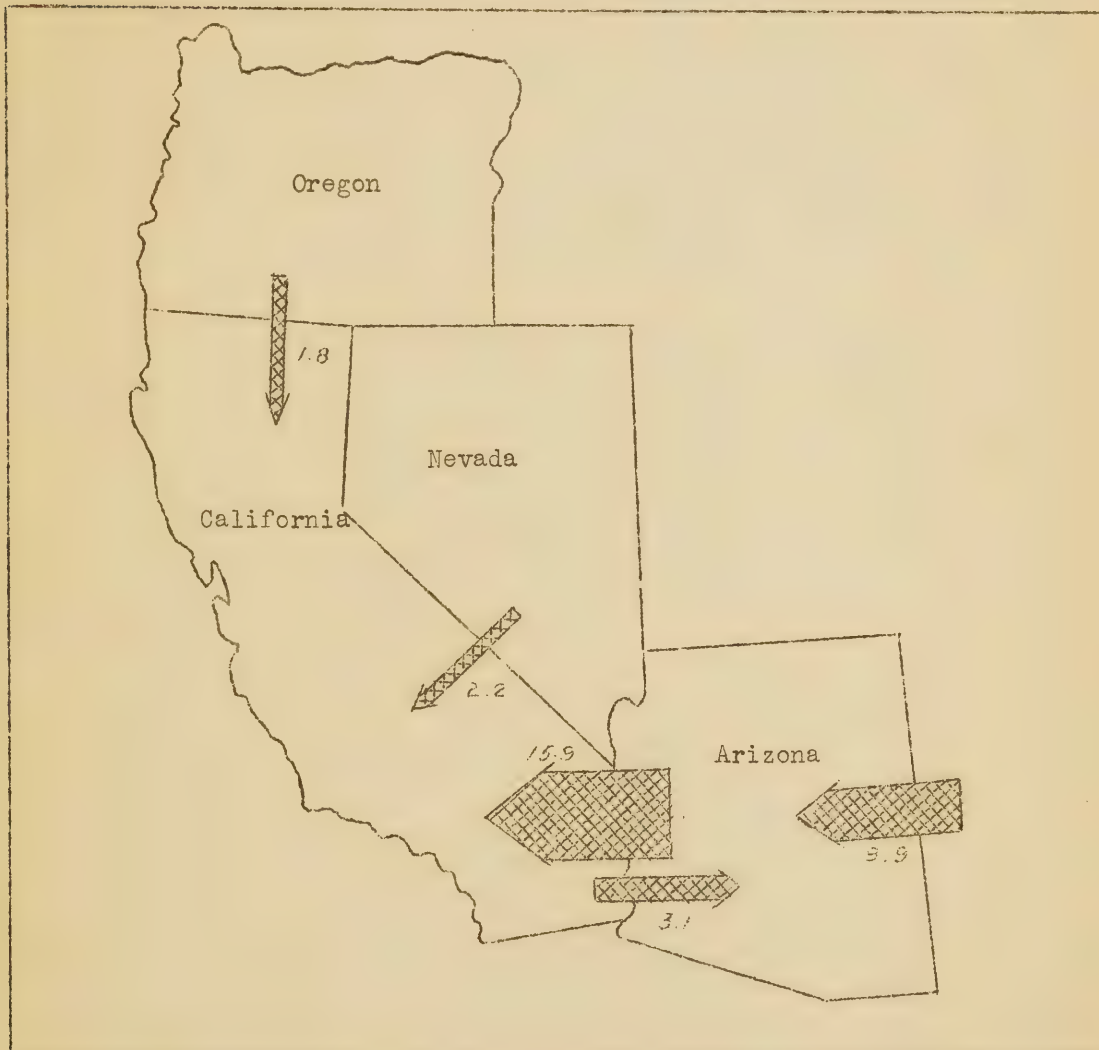

Chart 1.- During the first three months of 1941, Arizona Plant Quarantine Inspectors at the borders of the State counted 12,999 persons, members of parties they thought to be in need of manual employment, entering Arizona. California inspectors counted 19,846 such persons entering California during the first three months of 1941. (The relative size of the arrows indicates the numbers entering the States by the border through which the arrow points.)

PERSONS, MEMBERS OF PARTIES IN NEED OF MANUAL EMPLOYMENT
ENTERING ARIZONA AND CALIFORNIA BY MOTOR VEHICLE
JANUARY 1 TO MARCH 31, 1941 1/

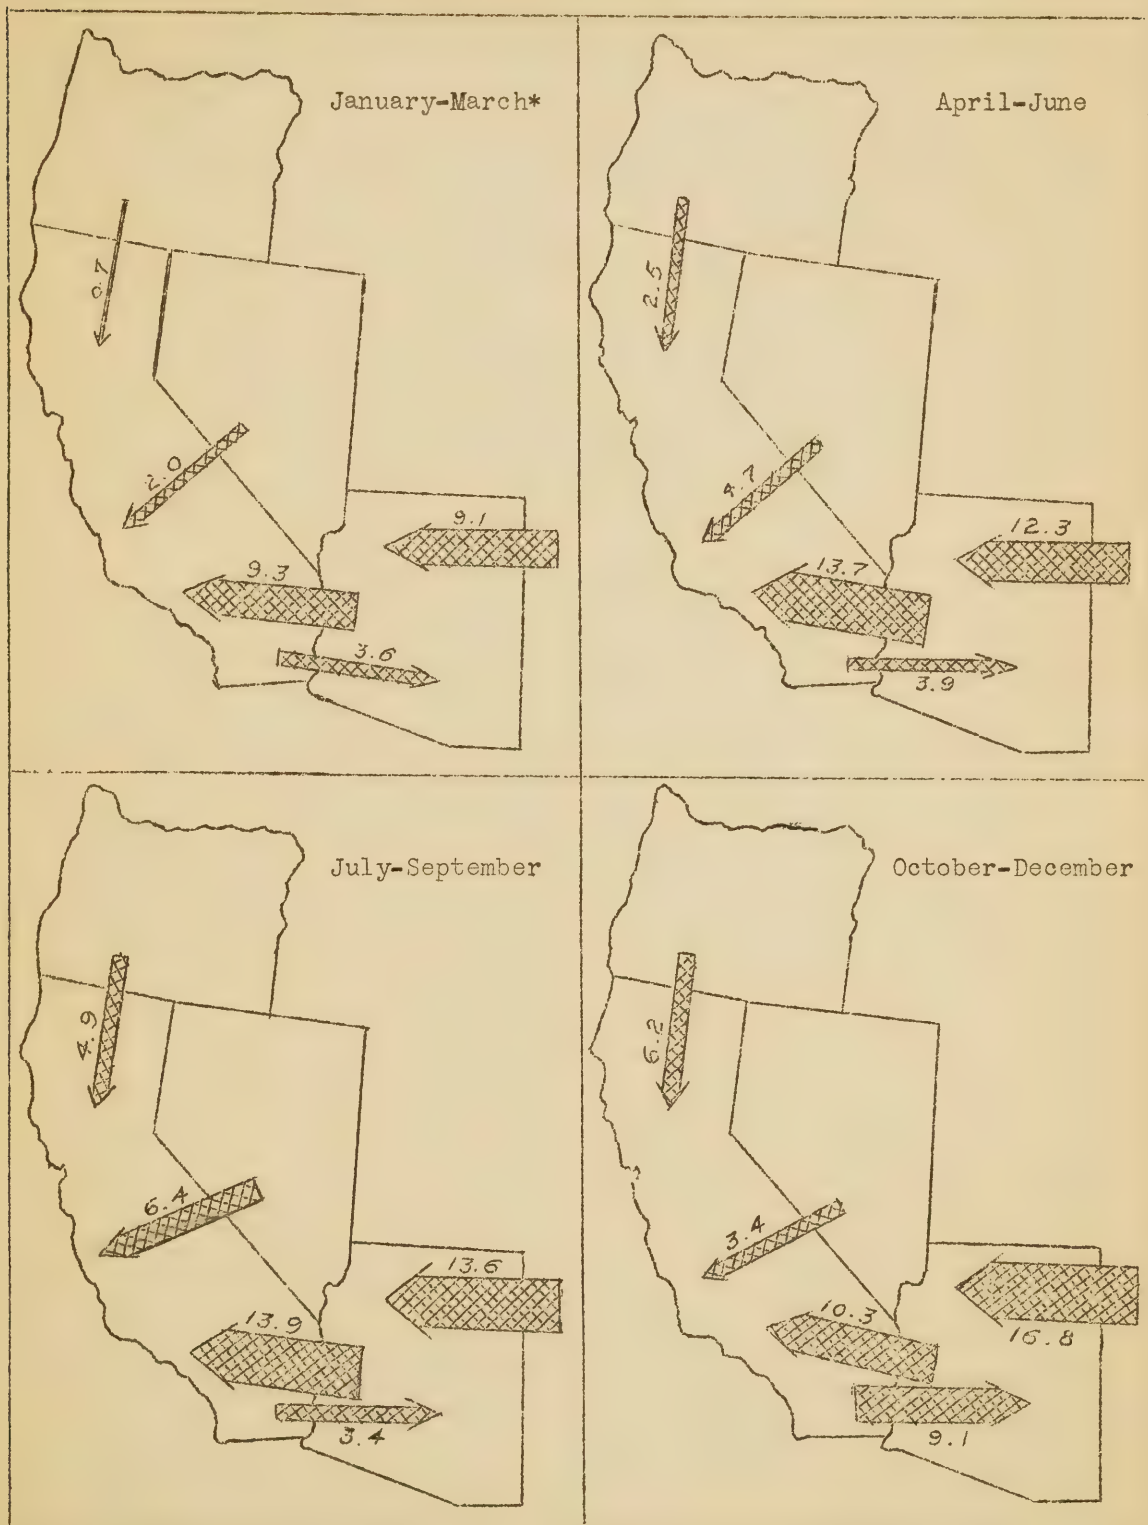

Arizona plant quarantine inspectors for the first 3 months of 1941 reported about the same number of persons, members of parties in need of manual employment, moving into Arizona both from the East and from California as was the case in the first quarter of 1940. On the California-Arizona border there were more than five times as many moving westward out of Arizona as were moving eastward into Arizona during this first quarter. For the corresponding period in 1940, the ratio was less than three to one. Whereas slightly more than 9,000 entered California from Arizona during the first quarter of 1940, nearly 16,000 were enumerated at this border in the first quarter of 1941. (See charts 1 and 2.) Whether or not expansion in defense industries in California was in any way responsible for this greater exodus from Arizona is not yet known.

A large portion of the exodus from Arizona to California during the first 3 months of 1941 was made up by parties returning to California in cars with California license plates. Most of such parties appear to be agricultural laborers moving in a seasonal migration to crop harvests. Excluding January figures which are not comparable for the two States, 12,187 persons in California cars entered Arizona across the California border in 1940. For the same 11 months 9,465 persons in California cars returned to California by this border. Hence, there was a net outflow of 2,722 persons from California in California cars during 1940.

1/ This is the fifth in a series of quarterly reports of the count maintained by Arizona and California plant quarantine inspectors of "persons, members of parties in need of manual employment" entering these States by motor vehicle. All motor vehicles entering California and Arizona are required by law to stop at border stations for plant quarantine inspection. No questions are asked of travelers as to whether they are seeking "manual employment." However, the appearance and equipment of agricultural and other manual laborers are well known to the inspectors and from such evidence they judge whether the parties appear to be "in need of manual employment." Persons traveling by bus are not counted. The number of persons in the vehicle, the race of the occupants, and the State of automobile registration are enumerated.

The California "border count" was begun in June 1935 at the suggestion of the Farm Security Administration and has been maintained continuously since that date. In January 1940, the Arizona Commission of Agriculture and Horticulture began a similar count, at the request of the Bureau of Agricultural Economics. Both counts are analyzed in the current series of quarterly reports issued at Berkeley, California. Acknowledgment is made to the Arizona Commission of Agriculture and Horticulture and the California State Department of Agriculture for maintaining these counts.

Chart 2.- Number of persons, members of parties in need of manual employment, entering Arizona and California during 1940, by quarters

*Arizona count began on January 16, 1940.

The relative size of the arrows indicates the total number of these persons entering the States by the border through which the arrow points (numbers are in thousands).

Nearly half of all of the parties in California cars entering Arizona during 1940 were concentrated in October, November, and December, the peak harvest months in Arizona.

During the first 3 months of 1941, 4,640 persons in cars registered in California returned to California across the Arizona border. Only 1,906 persons left in California cars by this border. When the total 15 months are considered, it is found that about the same number of Californians returned to California as had moved to Arizona by this route during this period.

Manual laborers with cars registered in Arizona in 1940 left Arizona for California largely in April, May, June, July, and August, which are the months when seasonal labor demand is at its lowest in Arizona but approaching its peak in California. They return to Arizona largely during September, October, November, and December, the peak harvest season in Arizona (table 4).

While in the 15 months from January 1940 through March 1941 the same number of Californians who came to Arizona return to California from Arizona, those persons in Arizona cars who leave Arizona do not by any means return. During these 15 months 10,716 persons in parties of manual laborers left Arizona for California in cars with Arizona license plates but only 2,514 returned from California. The fact that less than one-fourth of these manual laborers return is not due to a change in license plates, for both the California and Arizona harvest seasons are within the same calendar year. The explanation probably lies in the fact that Arizona has served as a transitional place of residence for agricultural population migrating to California and the Pacific Northwest. It seems likely that many who are migrating westward stop over in Arizona for one or two harvest seasons and then move to California.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that this is crucial for the company's financial health and for providing reliable information to stakeholders.

2. The second part of the document outlines the procedures for recording transactions. It details the steps involved in the accounting process, from identifying a transaction to recording it in the appropriate ledger.

3. The third part of the document discusses the importance of reconciling accounts. It explains how regular reconciliations help to ensure that the company's records are accurate and up-to-date.

4. The fourth part of the document discusses the importance of maintaining proper documentation. It emphasizes that all transactions should be supported by appropriate evidence, such as invoices and receipts.

5. The fifth part of the document discusses the importance of reviewing and auditing the company's records. It explains how regular reviews and audits help to identify any errors or discrepancies and to ensure that the company's records are accurate and reliable.

6. The sixth part of the document discusses the importance of maintaining proper control over the company's assets. It emphasizes that all assets should be properly identified, valued, and protected.

7. The seventh part of the document discusses the importance of maintaining proper control over the company's liabilities. It emphasizes that all liabilities should be properly identified, valued, and managed.

8. The eighth part of the document discusses the importance of maintaining proper control over the company's cash flow. It emphasizes that all cash transactions should be properly recorded and managed.

9. The ninth part of the document discusses the importance of maintaining proper control over the company's inventory. It emphasizes that all inventory should be properly identified, valued, and managed.

10. The tenth part of the document discusses the importance of maintaining proper control over the company's fixed assets. It emphasizes that all fixed assets should be properly identified, valued, and managed.

11. The eleventh part of the document discusses the importance of maintaining proper control over the company's intangible assets. It emphasizes that all intangible assets should be properly identified, valued, and managed.

12. The twelfth part of the document discusses the importance of maintaining proper control over the company's human resources. It emphasizes that all human resources should be properly identified, valued, and managed.

13. The thirteenth part of the document discusses the importance of maintaining proper control over the company's intellectual property. It emphasizes that all intellectual property should be properly identified, valued, and managed.

14. The fourteenth part of the document discusses the importance of maintaining proper control over the company's reputation. It emphasizes that all reputation should be properly identified, valued, and managed.

15. The fifteenth part of the document discusses the importance of maintaining proper control over the company's overall performance. It emphasizes that all performance should be properly identified, valued, and managed.

Report No. 4

Chart 1.- During 1940, Arizona plant quarantine inspectors at the State borders counted 71,844 persons, members of parties they judged to be in need of manual employment, entering Arizona by motor vehicle. California inspectors counted 80,200 such persons entering California during 1940. (The chart above indicates the total number of such persons entering California and Arizona by months.)

PERSONS, MEMBERS OF PARTIES IN NEED OF MANUAL EMPLOYMENT
ENTERING ARIZONA AND CALIFORNIA BY MOTOR VEHICLE
JANUARY - DECEMBER 1940 1/

During 1940, 15,413 parties entering Arizona in automobiles and trucks were judged by plant quarantine inspectors to be "in need of manual employment." Such parties, made up of men, women, and children, averaging nearly 5 persons to a vehicle, included a total of 71,844 persons. California inspectors, during 1940, counted 16,943 automobile parties they thought to be "in need of manual employment." These parties contained a total of 80,200 persons and also averaged about 5 persons to a vehicle.

These figures include persons crossing the borders of California and Arizona for many reasons and having a variety of destinations. Most of them are migrants only in the sense that they have left a residence of years as farmers or laborers in the South Plains States and are migrating to establish a new home in the Pacific Coast States or in Arizona.

Many of such parties are seasonal agricultural workers, moving in their regular work patterns to short-time jobs in the intensive crop areas of Arizona or the Pacific Coast States. Among these are parties of Filipino, Mexican, and Negro single men following crop harvests, perhaps, over as many as five or six Western States.

1/ This is the annual summary in a series of quarterly reports of the count maintained by Arizona and California plant quarantine inspectors of "persons, members of parties in need of manual employment," entering these States by motor vehicle. All motor vehicles entering California and Arizona are required by law to stop at border stations for plant quarantine inspection. No questions are asked of travelers as to whether they are seeking "manual employment." However, the appearance and equipment of agricultural and other manual laborers are well known to the inspectors and from such evidence they judge whether the parties appear to be "in need of manual employment." Persons traveling by bus are not counted. The number of persons in the vehicle, the race of the occupants, and the State of automobile registration are enumerated.

The California "border count" was begun in June 1935 at the suggestion of the Farm Security Administration and has been maintained continuously since that date. In January 1940, the Arizona Commission of Agriculture and Horticulture began a similar count, at the request of the Bureau of Agricultural Economics. Both counts are analyzed in the current series of quarterly reports issued at Berkeley, California. Acknowledgment is made to the Arizona Commission of Agriculture and Horticulture and the California State Department of Agriculture for maintaining these counts.

Some of the parties entering Arizona from California are on their way to eastern States. In some instances they are the same people who in previous years migrated to the Western States.

California Border Count 1935-40

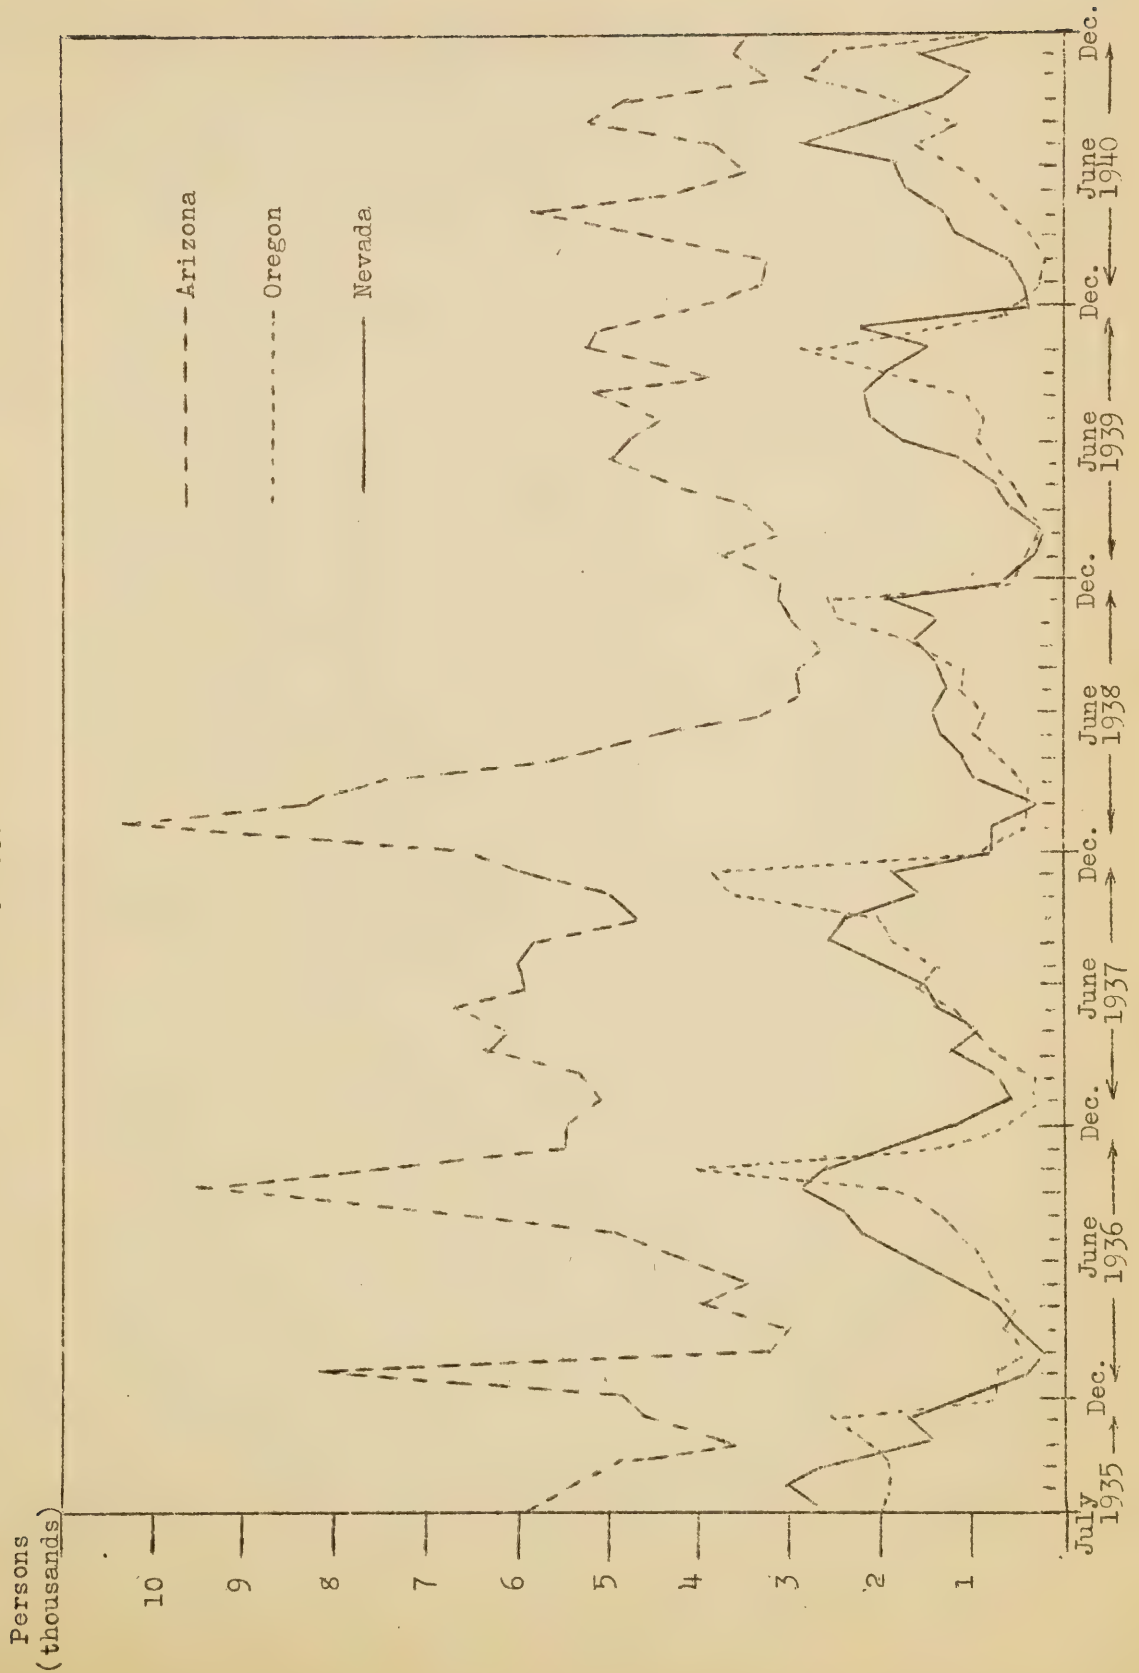

As the California count has been continuously maintained since July 1935, the statistics for 1940 can be compared with those of the previous four years. During 1936, a total of 97,344 "persons in parties in need of manual employment" were counted entering California. In 1937, the count was 105,185; in 1938, 85,166; in 1939, 79,246; and in 1940, 80,200. Chart 2 shows the total number of persons entering California by months from July 1935 to December 1940 by the border of the State through which they entered.

The great majority of those entering California by highways from Arizona during the past five years came in cars bearing the license plates of States in the South Plains. In each year, more than a third of the total came from Oklahoma and Texas, and approximately one-half of the annual total came from the three States of Oklahoma, Texas, and Arkansas. More than three-fourths of the "persons, members of parties in need of manual employment" counted entering California on the Arizona border came from the Plains States of Oklahoma, Texas, Arkansas, Missouri, Kansas, Nebraska, North Dakota, South Dakota, Wyoming, Colorado, and New Mexico. The count on the Arizona border during 1940 showed a continuation in somewhat reduced volume of the migration from the South Plains States which has characterized this enumeration since July 1935. These people are largely distressed agricultural population--the so-called "drought refugees" whose migration to the Pacific Coast States during the 1930's has attracted such widespread attention.

Following the drought and dust storms, the westward migration of distressed agricultural population reached a peak in 1936 and 1937 and during the first months of 1938. Apparently, this westward migration has not followed a seasonal pattern. The regular seasonal movement of agricultural workers crossing the Arizona border into California is not clearly indicated in these total figures for the border count because the overwhelming majority of the parties are those migrating westward from the South Plains.

The movement of manual laborers across the Nevada border of California had its origin largely in the North Plains States of the Dakotas, Nebraska, Kansas, and the Mountain States of Idaho, Colorado, Wyoming, Utah, and Montana. Unlike the migrations from the South Plains, this movement has been approximately constant during the past five and one-half years. The count at this border indicates some seasonal variation; there are relatively few counted during the first month of each year, the great majority enter the State within a 4- or 5-month period, usually between July and November.

Chart 2.- Persons, members of parties in need of manual employment entering California by the Arizona, Nevada, and Oregon borders of California from July 1935 to December 1940

The count at the Oregon border of California is more nearly an index to a seasonal pattern followed by migratory agricultural laborers. More than two-thirds of the persons counted at this border traveled in cars registered in Oregon, California, and Washington. The peak exodus from Oregon in each year came in October or November as large numbers of farm laborers move out of the Northwest toward the winter crops of California and Arizona. In each year, the low month for this movement was in March or April.

Arizona-California Border Count in 1940

The Arizona border count in conjunction with the California count provided for the year 1940 information not previously available. Approximately the same number of persons in need of manual employment were counted entering Arizona from the east moving westward as were counted entering California from Arizona during 1940. Also, the States of car registration are substantially in the same order of importance. This indicates that the parties entering California from Arizona are in most instances the same parties counted entering Arizona from the east. However, the greater importance of cars registered in California and Arizona among those entering California is evidence that many parties are moving or returning to California from an indefinite period of residence in Arizona and are not coming directly from the east.

While it is clear that the westward moving population entering Arizona had, in most cases, California as a destination, the seasonal demand for agricultural labor within Arizona materially retards and modifies this migration. High seasonal demands for agricultural labor in the cotton and truck crops of Arizona during September, October, November, and December provide employment for migrants moving westward and also draw many seasonal agricultural laborers from California.

In February the total number of manual laborers entering California from Arizona was 120 percent of the number entering Arizona from the east. This disparity was due to parties from California and Arizona returning to California in addition to migrants from the east continuing to California after a short-time residence in Arizona. This disproportion was true in March, April, June, July, and August. However, when the demand for seasonal labor increased in Arizona this changed. Those moving westward into California from Arizona were only 80 percent of the number entering Arizona from the east in September, 61 percent in October, only 55 percent in November (the peak month for labor demand in Arizona), and 71 percent in December (chart 3).

During the first 9 months of 1940, the number of parties "in need of manual employment" moving eastward out of California into Arizona fluctuated between one-third and one-fifth of the number counted entering California by this same route. However, in October, the parties entering Arizona from California were 68 percent of the number

Chart 3.- Number of persons, members of parties in need of manual employment, entering Arizona from the east compared with the number entering California from Arizona during 1940, by months

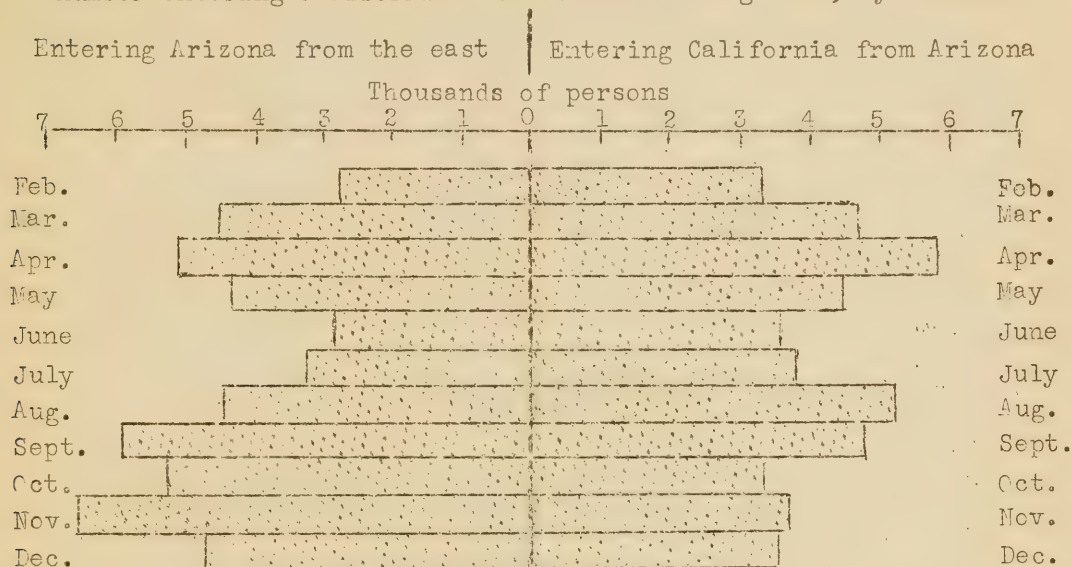

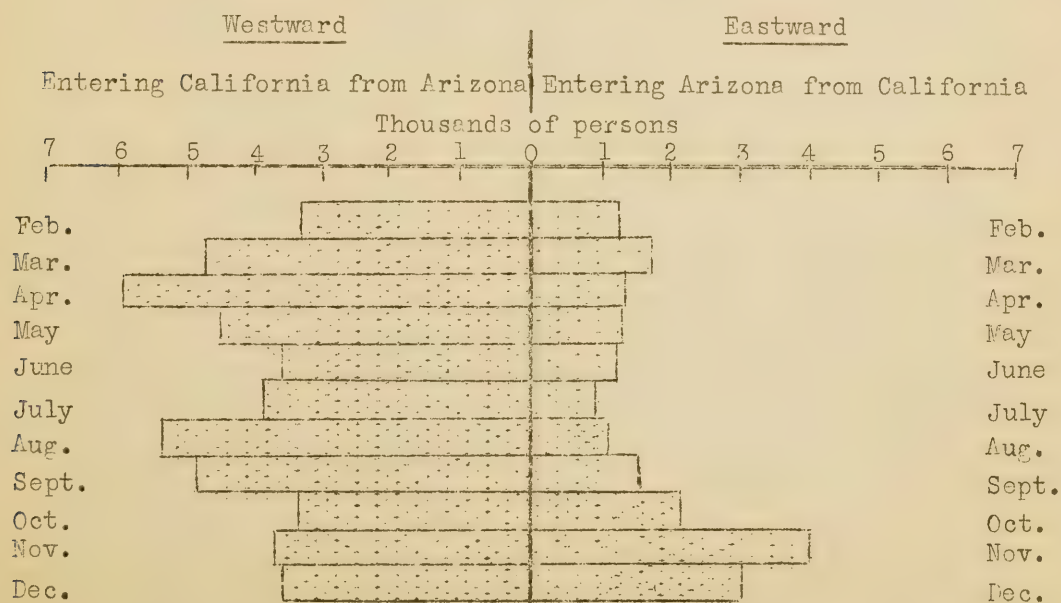

Chart 4.- The number of persons, members of parties in need of manual employment, moving westward into California from Arizona compared with the number of persons moving eastward from California into Arizona during 1940, by months

leaving Arizona for California; in November 300 more such persons came to Arizona from California than moved westward into California; and in December, the ratio of the eastward movement to the westward movement as measured at the California-Arizona border was 85 percent (chart 4). In short, during October, November, and December, there were almost the same number of "persons in need of manual employment" moving eastward across the California-Arizona border as were moving westward.

Persons, members of parties in need of manual employment
entering Arizona and California by motor vehicle
January 1 to September 30, 1940

REPORT NO. 3

In the first nine months of 1940, Arizona plant quarantine inspectors at the State's borders counted 45,938 persons, members of parties they thought to be in need of manual employment, entering Arizona. California inspectors counted 60,324 such persons entering California in this period. (The length of the bars shows the numbers entering by the indicated border of the State. The divisions of the bar indicate the State in which the cars were registered.)

Persons, Members of Parties in Need of Manual Employment,
Entering Arizona and California by Motor Vehicle
January - September, 1940 1/

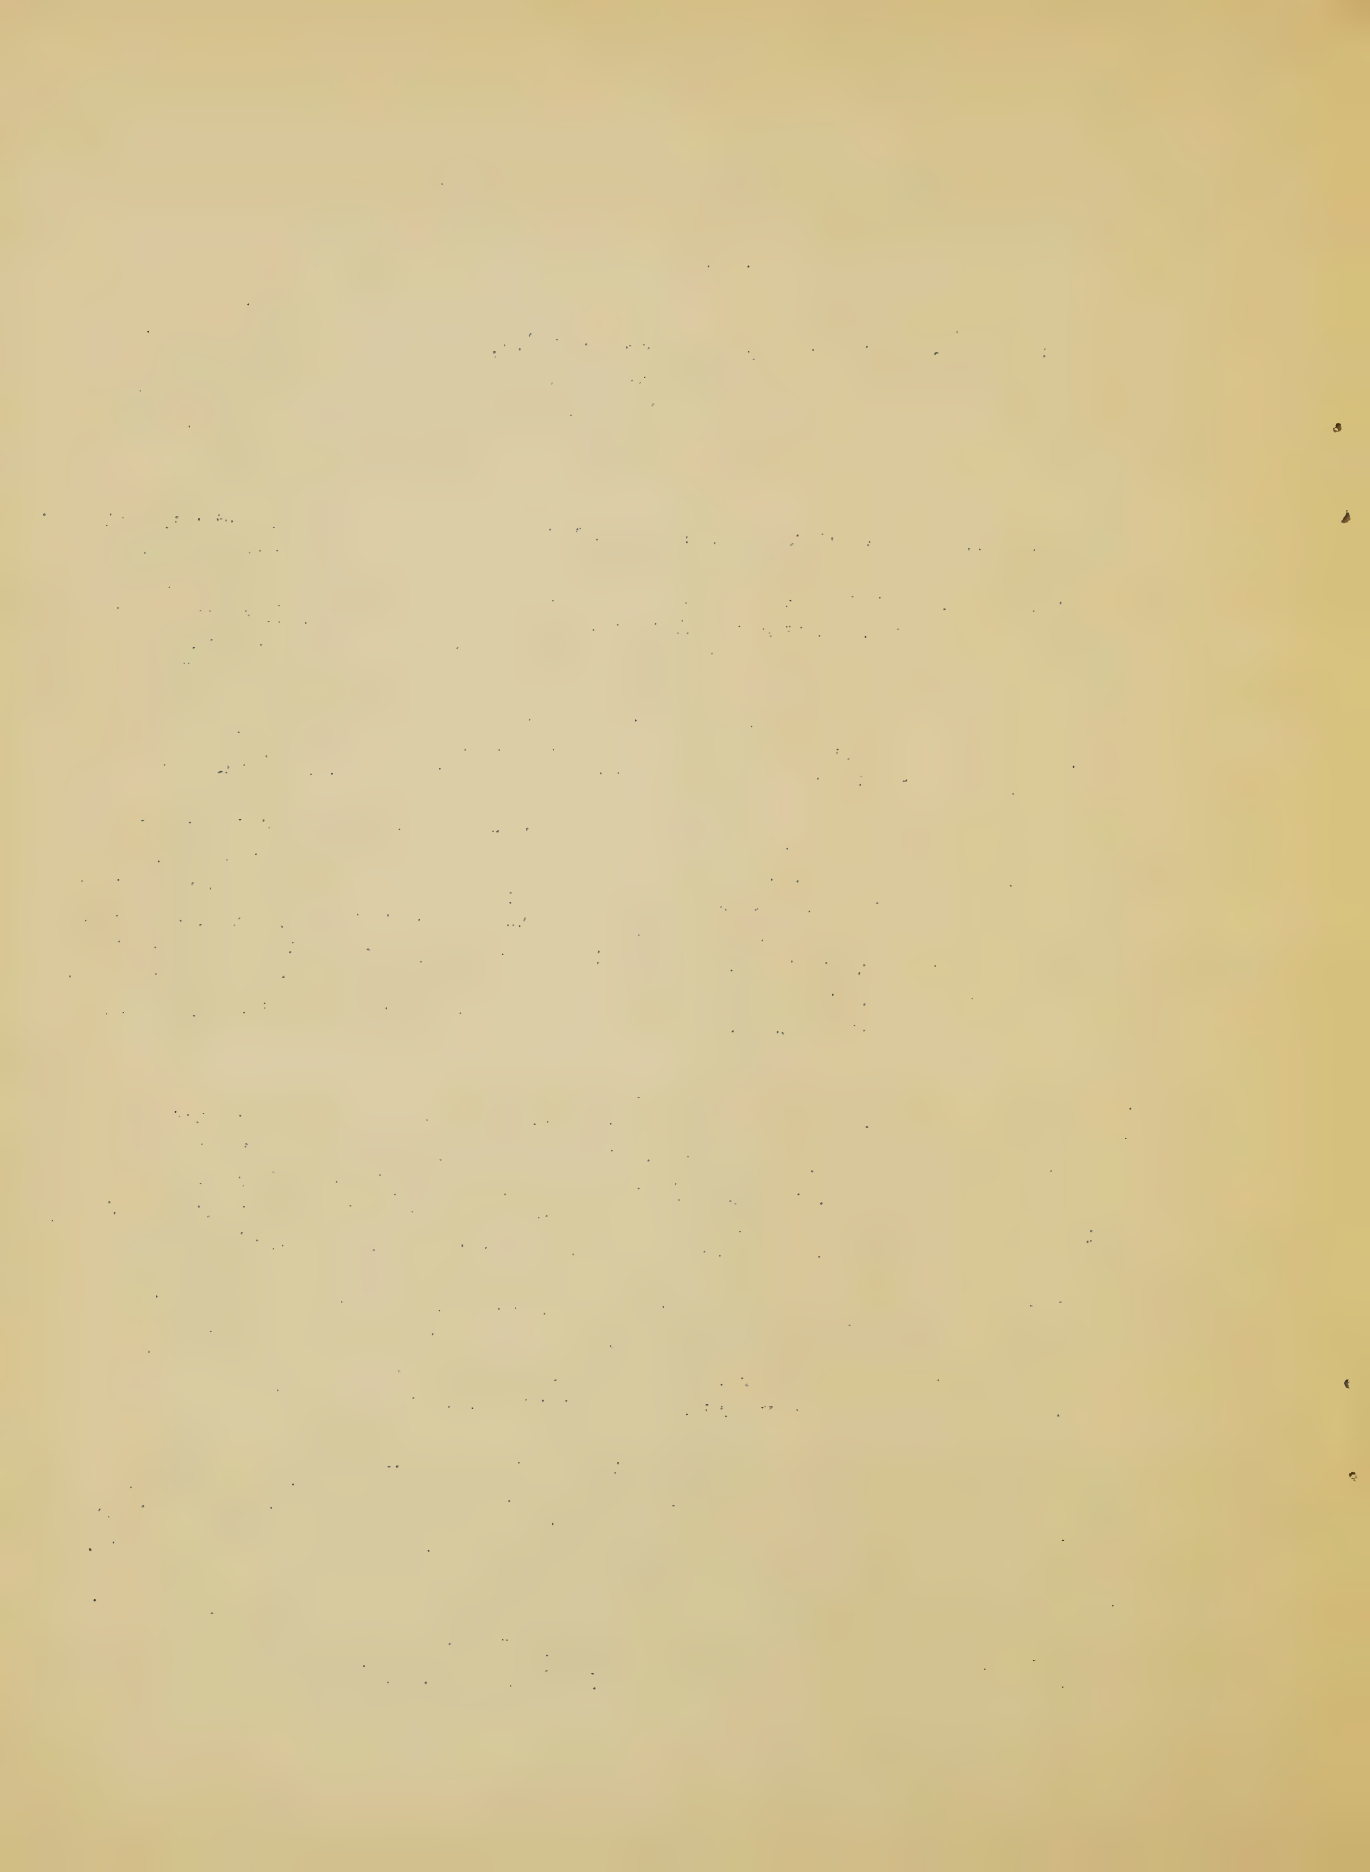

During the first nine months of 1940, 45,938 persons in parties "in need of manual employment" entered Arizona by motor vehicle, and 60,324 such persons entered California. These figures are of all persons, including men, women, and children travelling in parties which were thought by the inspectors to need or to be in search of manual employment.

The movement of manual laborers into California and Arizona during the first nine months of 1940 is a continuation of the migration to these States from the South Plains and Great Plains States, principally, Texas, Oklahoma, Arkansas, Missouri, Kansas, and New Mexico, which characterized the decade of the 1930's. Compared with previous years, the number of such migrants entering California during the first nine months of 1940 is substantially greater than the number arriving in the corresponding months of 1939, but somewhat smaller than the "border count" during the years of 1936 and 1938, and considerably less than the "count" for the peak year of 1937.

As measured by the "border count," the migration of this type of laborer is still predominantly westward. More than three-fourths of such persons counted entering Arizona came across the eastern border of the State. In excess of 85 percent of such "migrants" to California entered on the State's eastern borders. Manual laborers entering California from the north (Oregon border) amounted to less than 15 percent of the total movement into California. Moving eastward out of California into Arizona

1/ This is the third in a series of quarterly reports of the count maintained by Arizona and California plant quarantine inspectors of persons, members of parties "in need of manual employment," entering these States by motor vehicle. All motor vehicles entering California and Arizona are required by law to stop at border stations for plant quarantine inspection. No questions are asked of travellers as to whether they are seeking "manual employment." However, the appearance and equipment of agricultural and other manual laborers are well known to the inspectors and from such evidence they judge whether the parties appear to be in need of "manual employment." Persons travelling by bus are not counted.

The California "border count" was begun in June 1935 at the suggestion of the Farm Security Administration and has been maintained continuously since that date. In January 1940, the Arizona Commission of Agriculture and Horticulture began a similar count, at the request of the Bureau of Agricultural Economics. Both counts are analyzed in the current series of quarterly reports issued at Berkeley, California. Acknowledgment is made to the Arizona Commission of Agriculture and Horticulture and the California State Department of Agriculture for maintaining these counts.

during these nine months of 1940, 10,880 persons "in need of manual employment" were counted by the Arizona inspectors; this number is but slightly more than one-fourth of those counted entering California by the same route. More than three times as many persons "in need of manual employment" entered Arizona moving westward as were counted entering this State moving eastward.

Persons, Members of Parties in Need of Manual Employment
Entering Arizona and California by Motor Vehicle
January 1 to June 30, 1940

REPORT NO. 2

JUN 11 1941
BUREAU OF AGRICULTURAL ECONOMICS
FARM SECURITY ADMINISTRATION

In the first six months of 1940, Arizona Plant Quarantine Inspectors at the state's borders counted 28,864 persons, members of parties they thought to be in need of manual employment, entering Arizona. California Inspectors counted 35,150 such persons entering California in this period. (The length of the bars shows the numbers entering by the indicated border of the state. The divisions of the bar indicate the state of the cars' license.)

Handwritten notes in the top right corner, possibly a list or index, with some underlined text.

Main body of handwritten text, appearing to be a list or index, with multiple lines of text and some underlining.

Persons, Members of Parties in Need of Manual Employment,
Entering Arizona and California by Motor Vehicle
January - June, 1940 1/

During the first six months of 1940, 28,864 persons in parties "in need of manual employment" entered Arizona and 35,150 such persons entered California by motor vehicle. These numbers include men, women and children, with an average of approximately 5 persons per motor vehicle counted.

As compared with previous years, the number of such migrants entering California during the first half of the current year is considerably larger than the number arriving during the corresponding months of 1936 and 1939, but substantially less than the migration during the peak years of 1937 and 1938.

In large part, the movement of people "in need of manual employment" into California and Arizona during the first six months of 1940

1/ This is the second in a series of quarterly reports analysing the count maintained by Arizona and California Plant Quarantine Inspectors of persons, members of parties "in need of manual employment," entering these states by motor vehicle. All motor vehicles entering these states are required by law to stop at border stations for plant quarantine inspection. No questions are asked of travellers as to whether they are seeking "manual employment." However, the appearance and equipment of agricultural and other manual laborers are well known to the inspectors and from such evidence they judge whether the parties appear to be in need of "manual employment." Persons travelling by bus are not counted.

The California border count was begun in June, 1935 at the instance of the Farm Security Administration and has been maintained continuously since that date. In January, 1940, the Arizona Commission of Agriculture and Horticulture began a similar count, at the request of the Bureau of Agricultural Economics. Both counts are analysed in the current series of quarterly reports issued at Berkeley, California. Acknowledgment is made to the Arizona Commission of Agriculture and Horticulture and the California State Department of Agriculture for maintaining these counts.

evidently represents a continuation of the distress migration to these states which characterized the decade of the 1930's. The direction of movement is still predominantly westward. Nearly three-fourths of the persons counted moving into Arizona entered the state from the east (Table 1). More than 70 per cent of the migrants to California entered from Arizona and an additional 20 per cent entered from Nevada. Southbound migration across the Oregon border amounted to less than ten per cent of the total movement into California. Moving eastward out of California into Arizona were 7,447 persons, somewhat less than one-third as many as were counted moving into California by the same route.

As during the 1930's, the majority of the westbound migrants came from the South Plains and South Central states of Oklahoma, Texas, Arkansas, Missouri, Kansas, and Colorado. However, a large and apparently increasing proportion of the migrants were travelling in cars licensed from California and Arizona. Nearly 35 per cent of all persons moving into California from the east and nearly one-fifth of those entering Arizona westbound were travelling in California and Arizona cars (Tables, 3, 4, 6 and 7). Of the migrants eastbound from California into Arizona, more than 70 per cent originated in those states as indicated by their automobile registrations.

Marked differences are apparent in the fluctuation of migration as among the various directions of movement. Westward movement into Arizona increased during the winter months, reaching a peak in April, and has since declined sharply (Table 1). Migration into California from Arizona likewise peaked in April and has subsequently declined. In

contrast, the flow into California from Oregon has increased in each month since February, despite reports of agricultural labor scarcity in the Pacific Northwest. Much of the increase in movement out of Oregon is attributable to an increasing number of persons travelling in California and Arizona cars, indicating a return movement on the part of people who had gone from these states to the Northwest at an earlier date. Migration into California across the Nevada border has likewise steadily increased. Contrasting with both westward and southward movements, eastward migration out of California into Arizona has remained nearly constant in volume, with exception of a small increase during March.

More than 90 per cent of all persons enumerated in the two border counts were of the white race. Seven per cent were Mexicans and the remainder chiefly Negroes. Nearly all of the Mexicans were travelling in cars registered in California, Arizona, Texas, New Mexico, and Colorado. More than half of the Negroes were from California and Arizona and the remainder chiefly from Oklahoma, Texas, Arkansas, and Missouri.

Persons, Members of Parties in Need of Manual Employment,
Entering Arizona* and California by Motor Vehicle
January 1 to March 31, 1940

REPORT NO 1

*Arizona reports
from January 16
to March 31, 1940.

During the first two and one-half months of 1940, Arizona Plant Quarantine Inspectors at the state's borders counted 12,707 persons, members of parties they thought to be in need of manual employment, entering Arizona. California Inspectors counted 14,288 such persons entering California during the first three months of 1940. (The relative size of the arrows indicates the numbers entering the states by the border the arrow points through.)

Berkeley, California
May 1, 1940

This is the first in a series of reports to be issued every three months from the count made by the Plant Quarantine Inspectors of Arizona and California of the persons, members of parties that appeared to be "in need of manual employment," entering the states of Arizona and California by motor vehicle. All motor vehicles entering Arizona and California must stop at border stations of the Plant Quarantine Inspectors where the cars are examined to see if they contain any fruits, vegetables or plants which cannot be brought into the respective states. During this inspection no questions are asked of the car's occupants as to whether they are seeking "manual employment." However, the appearance and equipment of agricultural and other laborers are well known to the inspectors and from these criteria they judge whether the parties appear to need "manual employment"; for such parties they note the number of persons in the vehicle, the state of the car's license, and the race of the occupants. Persons traveling by bus are not counted.

In California, the border count was started in June 1935 at the suggestion of the Farm Security Administration. Since that time, the Farm Security Administration has analyzed and made these data available to interested agencies.

On January 16, 1940, the Arizona Commission of Agriculture and Horticulture, at the suggestion of the Bureau of Agricultural Economics, began for the first time to count, at its border stations, the persons, members of parties "in need of manual employment," entering Arizona by motor vehicle. 1/

Approximately 350,000 persons from other states, in parties judged to be "in need of manual employment," were counted entering California by Plant Quarantine Inspectors between the middle of 1935 when the border count was started in California and the end of 1939. In addition, approximately 67,000 persons of this type reentered the state in cars with California license plates. During these five years this count provided the only figures available on the westward flow of "migrants" and it

1/ The cooperation of Mr. J. L. E. Lauderdale, State Entomologist of the Arizona Commission of Agriculture and Horticulture, and the staff of inspectors at the border stations who promptly and accurately started this enumeration is gratefully acknowledged.

also indicated the states from which such migrants were coming. The Arizona border count in connection with the California count now provides an index to such migrants entering Arizona and also makes possible some approximation of the numbers returning eastward across Arizona's western border.

During the first three months of 1936, 17,389 persons were counted coming into California; in this same period in 1937, 20,401 persons entered; in 1938, 29,634; and in 1939, 12,027 entered the state in the period January through March. In the first three months of 1940 the border count indicated 14,288 persons as entering California--a substantial increase over the number entering the state in this period in the previous year, but less than half that number which came into California in these three months in 1938.

As no border count was made for the first half of January in Arizona, it is only possible to compare the California and Arizona counts for February and March 1940. In February, 2,741 persons were counted moving westward across Arizona's eastern border. In this same month, 3,288 such persons were enumerated entering California from Arizona. For March the inspectors reported 4,543 persons entering Arizona from the east and 4,645 entering California from Arizona. The ratio of the number of persons counted entering Arizona from the east to the number of such persons entering California from Arizona was 83 percent in February and 98 percent in March.

In February, when 3,288 persons in parties "in need of manual employment" entered California from Arizona, 1,228 persons moved eastward into Arizona from California. During March, when 4,645 persons entered

California from Arizona, 1,655 persons of this type entered Arizona from California. The ratio of the eastward moving persons leaving California to the westbound persons entering California across the Arizona border was 37 percent in February and 36 percent in March. In other words, during these months for every three persons of this type that entered California across the Arizona border, slightly more than one such person left California by this route.

a/ Data collected by Plant Quarantine Inspectors, Arizona Commission of Agriculture and Horticulture.

b/ January 16-31 only; no count available for first half of month.

c/ Data collected by Plant Quarantine Inspectors, California State Department of Agriculture.

That the persons moving westward across Arizona's eastern border are in large part on their way to California, is indicated by Tables 3 and 6. Not only was the number entering Arizona from the east approximately the same as that number entering California from Arizona, but the states of car registration are in the same order of importance in the first three instances and in substantial agreement throughout both tables.

As might be expected, Arizona as a state of car registration, is more important both relatively and in number among the cars entering California from Arizona than among those entering Arizona from the east.

In 1938, 20 percent of all persons counted as entering California in that year as members of parties "in need of manual employment", traveled in cars with California license plates. Next in importance were Oklahoma cars containing 16 percent of all counted; 13 percent came in cars registered in Arizona, 10 percent from Texas, and 6 percent from Arkansas. During 1939 more persons of this type entered California in cars from Oklahoma than any other one state. Of all persons enumerated in the border count in 1939, 19 percent were in Oklahoma cars, 18 percent in California registered cars, 12 percent in Arizona cars, 10 percent in Texas cars, 6 percent in cars from Arkansas and 5 percent from Missouri.

Since the California border count began, not counting California and Arizona, the states of Oklahoma, Texas, Arkansas, Missouri, Kansas, New Mexico, Nebraska, and Colorado have been the most important origins of this westward migration. The count for the first quarter of 1940 indicates the migration to be out of these areas in substantially the same order of importance.

In this first quarter of 1940, entering California across the Nevada border, persons traveling in cars registered in California, Oklahoma, and Texas were most important; however, across this border more such persons came in Idaho and Colorado cars than in those registered in Missouri or Arkansas.

Of those persons moving across the Oregon border into California, more than 40 percent were in cars registered in Oregon, 20 percent of

them were in Washington cars, and 19 percent in California cars. However, cars registered in Arkansas and Oklahoma contained 4 percent of the persons entering California from the north.

Moving eastward across Arizona's border, coming from California, 61 percent of the persons enumerated were in cars with California license plates, 10 percent in Oklahoma cars, 8 percent in Arizona cars, and 6 percent in cars registered in Texas. Doubtless, a great many of those moving eastward in cars with California and Arizona licenses had but recently come to California and Arizona from states in the east.

Approximately 95 percent of all persons enumerated in the border count as entering Arizona were of the white race; 93 percent of those entering California were of the white race. Of all the Mexicans indicated in the border count as coming into Arizona across all borders of the state in the first three months of 1940, 66 percent came into Arizona from California. Of the negroes entering Arizona in this period, 85 percent came in across the California border. More than 95 percent of the Mexicans counted entering California from January through March 1940 through all border stations, entered the state across the Arizona border. Ninety-one percent of all negroes counted entering California came in from Arizona. There were no Mexicans or negroes reported entering California from the Oregon border during those three months.
